Key Rating Drivers

Parent Support Drives IDRs: Kuveyt Turk Katilim Bankasi A.S (Kuveyt Turk)'s Issuer Default Ratings (IDR), Support and National Long-Term Ratings are driven by potential support from the bank's majority shareholder, Kuwait Finance House (KFH, A+/Stable). Fitch Ratings views Kuveyt Turk as a strategically important subsidiary. The cost of supporting Kuveyt Turk is, in our opinion, still manageable for KFH. Kuveyt Turk represents around 24% of KFH's assets but contributes a higher 40% of consolidated group income.

IDRs Constrained: Fitch would normally rate a strategically important subsidiary a maximum of two notches below its parent's IDR. Wider notching between the IDRs of Kuveyt Turk and KFH reflects Country Ceiling constraints (applicable to the Foreign-Currency (FC) IDR) and Turkey's volatile environment, which could affect a foreign owner's commitment to a subsidiary during periods of high stress (Local-Currency IDR).

Modest Franchise, Ambitious Plans: Kuveyt Turk (2% share of banking sector assets) provides Islamic banking services, known locally as participation banking). This limits its product range but demand for such services is growing. Kuveyt Turk is one of Turkey's fastest growing banks. Its target is to rank amongst the country's 10 largest banks by end-2018, implying doubling its assets, which appears ambitious.

Good Asset Quality: Asset quality indicators are sound, with impaired loans and restructured/watch list loans respectively representing 2.2% and 3.8% of total loans at end-September 2014. Recoveries are regular and write-offs and impaired loan sales are not significant. Total impaired loan coverage was adequate at 78% at end-3Q14.

Loans Need Seasoning: Kuveyt Turk's underwriting standards need to be fully tested over a longer credit cycle in view of the rapidly expanding loan book (average annual loan growth between 2010 and 3Q14 was an annual 33%), high SME customer base (40% of total loans) and construction sector exposure (22% of on- and off- balance sheet exposures). FC loans (40% of lending at end-1H14) are also sensitive to exchange-rate volatility.

Healthy Liquidity, Adequate Capital: Kuveyt Turk's customer deposits, its main funding source, are diversified. Short-term market funding is increasing but refinancing risk is manageable. Liquid assets, equivalent to a satisfactory 20% of assets, fully cover 2015 debt repayments. Kuveyt Turk's capital ratios are adequate considering KFH's commitment to regularly inject new capital into the bank to support growth.

Reasonable Profitability: Kuveyt Turk's performance is underpinned by wide net financing margins, reflecting material SME loans and no major asset quality deterioration to date.

Rating Sensitivities

Parent Drives IDRs: A change in KFH's ability and/or willingness to support Kuveyt Turk could affect the latter's IDRs, National Rating and Support Rating. Kuveyt Turk's Long-Term IDRs are also sensitive to changes in Turkey's Country Ceiling and the operating environment in Turkey.

Limited VR Upside: An upgrade of the bank's VR is unlikely in the short-term, mainly because underwriting standards need to be tested more fully given rapid recent credit growth.

Presentation of Accounts

This rating report is based on audited end of year and intermediary unaudited accounts prepared according to Banking Regulation and Supervision Agency (BRSA) accounting standards.

Operating Environment

Slowing Economic Growth

Fitch expects GDP growth in Turkey for 2014 to reach around 2.7% (1H14 growth was 3.3%) and the outlook for 2015 is for continued growth (GDP up around 3.5%). Turkey's interest rates can be volatile, as is the exchange rate of the Turkish lira against major currencies. The current account deficit, though declining in 2H14, is still high and maintaining investor confidence in Turkey is key in order to continue to attract international investment.

Small, Though Expanding, Islamic Banking Segment

Islamic banks offer interest-free products for which there appears to be growing demand in Turkey. Islamic banking still represents a small share (under 6% of assets at end-June 2013) of Turkey's banking sector but the government is encouraging development of the sector, with a target that it should reach around 20% of sector assets by end-2023. Competition is expected to increase as large state-owned commercial banks enter the market in 2015.

Company Profile

Kuveyt Turk is a small bank (13th largest by total assets in Turkey), with small sector shares in loans (2%) and deposits (1.6%). Kuveyt Turk's target customers are SME companies. The bank operates out of 296 branches in Turkey at end-3Q14, one branch in Bahrain, a subsidiary in Dubai and a representative office in Germany. An application for opening a branch in Qatar has been made. Foreign branches serve mainly corporate customers and are a source of additional deposits. The bank's branch network is still narrower relative to other conventional similar sized banks; Kuveyt Turk plans to open 15 branches per year until 2018.

Kuveyt Turk was incorporated in 1989 and is 62% owned by KFH, the second-largest bank in Kuwait (consolidated assets of USD59.4bn and equity of USD7.1bn at end-3Q14). The establishment process was initiated by the respective governments of Turkey and Kuwait to develop trade between the two countries. Kuwait state owns a direct 9% stake held through the Public Institution for Social Security state fund. The remaining shareholders include Islamic Development Bank (9%), General Directorate of Foundations, reflecting the interests of the Turkish sovereign (19%), and other shareholders (1%).

Kuveyt Turk is KFH's largest foreign subsidiary accounting for around 24% of the group's consolidated assets at end-3Q14. KFH is 49% owned by Kuwaiti government agencies. Its international operations include banking subsidiaries in Malaysia, Turkey and Bahrain.

Management

KFH does not have representatives in the executive management of Kuveyt Turk. Nonetheless, since 2014, the chairman of the board of directors of Kuveyt Turk is the chairman of KFH, while two additional board members (out of a total of nine) are KFH appointees. The other members include two Kuwaiti nationals, one member appointed by Islamic Development Bank and three members are Turkish nationals.

The board of directors is supported by audit and risk committees (established in 2011), comprising two independent members, appointed by KFH and the Turkish Foundations Directorate. A group manager (appointed in 2013 at KFH level) maintains regular contact with the bank's group risk and credit officers and the treasurer.

Related-party lending requires board approval. Traditionally modest, it increased notably in 1H13. At end-June 2013, the bank's largest risk was extended to companies which Fitch considers are related parties. Related-party loans declined to a moderate 12% of equity at end-1H14 and management does not expect this to increase.

The bank's long-term strategic plan is to become one of the 10 largest banks in Turkey by 2018, spurred by strong annual compounded growth of around 30%. Clear profitability targets

Related Criteria

[Global Financial Institutions Rating Criteria \(January 2014\)](#)

are included in the bank's plan. The bank aims to boost retail lending (housing loans and credit cards) to support margins. In Fitch's opinion, performance targets are fairly tough.

Kuveyt Turk's growth plan is a challenging one. It requires substantial organisational improvements (including IT capabilities, segmentation, service models, product offerings, advanced underwriting, risk control systems, etc.), as well as alternative funding resources. Turkey's large banks are highly competitive and Kuveyt Turk's main long-term challenge will be to combine the attraction of its religious principles with sufficiently competitive pricing. To date, asset quality remains satisfactory. Fitch will continue to monitor the effects of rapid growth on Kuveyt Turk's credit profile.

Risk Appetite

Strong growth targets imply somewhat heightened risk appetite but, to date, growth has been reasonably well managed. Underwriting standards appear to be in line with those adopted by other similar-sized banks. The audit and risk committee oversees all risks and reports directly to the board of directors. The bank implements a regional hub model, with six offices spread across the country, each responsible for its own region and equipped with its own risk management departments. Kuveyt Turk has a generic model for assigning internal ratings to corporate clients, while retail and SME clients are assigned internal scores. The bank is in the process of calibrating, back testing and refining models and this should be completed in 2014. In the absence of sufficient historic statistical data, assumptions have not yet been validated for corporate and SME loans. Data history for retail lending is sufficiently robust, but retail loans do not make up a sizeable proportion of lending at Kuveyt Turk.

Kuveyt Turk defines SME borrowers as companies with annual turnover of TRY40m. SME loans accounted for sizeable 40% total loans (see Figure 1 below) at end-June 2014. Given rapid growth, many customers are relatively new to the bank. The bank's decision to reduce FC lending resulted in a decline in the SME portfolio (see figure 1). Apart from mortgages, the bank has negligible exposure to other types of consumer loans.

Figure 1

Consumer loans	5	5	4
Total loans (%)	100	100	100

Source: Kuveyt Turk

Economic sector concentrations are not excessive (See figure 2). The most sizeable sectors include wholesale and retail trade, which is diversified across many sub-sectors, and the construction sector (56% of which was off-balance sheet). According to management, roughly half of construction off-balance sheet exposures, which comprise guarantees and commitments, are to state-funded projects. On-balance sheet construction exposures comprise mainly residential developments. House prices in major Turkish urban centres are rising quite rapidly but Kuveyt Turk advises that projects to which the bank is exposed are performing well. The share of FC loans (including those extended in Turkish lira but linked to FC rates) is, at around 40% of total loans roughly in line with the sector average. In 2014, Kuveyt Turk reached an agreement with state-owned Turkiye Ihracat Kredi Bankasi AS (Eximbank; BBB-/Stable), enabling its customers to access attractively priced export credit facilities. This should strengthen customer relationships.

The bank's main market risk relates to indirect repricing risk although in theory participation banks are not subject to interest rate risk. In practice, the bank adjusts its profit sharing ratio to ensure that profit share on deposit remains competitive with market rates. The local regulator imposes shocks on balance sheet items sensitive to profit share agreements, including deposits. For Turkish lira assets and liabilities, shocks of +5%/-4% are applied; for FC items, the shocks are +/- 2% and the resultant impact on equity is limited to 20%. The outcome of the stress test on the bank's equity at end-1H14 was 7%.

Open FC positions are usually hedged with forward transactions or swaps and aggregate net open FC positions are long and usually below 5% of equity and Fitch Core Capital (FCC).

Financial Profile

Asset Quality

Asset Quality is Reasonable; Loan Book Likely to be Unseasoned because of Rapid Growth

Figure 4
Asset Quality Metrics

(%)	3Q14	2013	2012	2011

Loan loss reserves/impaird loans – sector average	72.8	76.30	75.20	79.40

Source: Kuveyt Turk/BRSA

Asset quality indicators at Kuveyt Turk are better than the average for the banking sector, although rapid loan growth means that loans are largely unseasoned and loan quality indicators may not yet be representative of trends going forward. Potentially higher risk long-term bullet repayment loans are low, representing 6% of gross loans at end-1H14. Borrower concentration is not high which is positive. The largest 20 on- and off-balance sheet exposures at end-June 2014 accounted for 10% of total commitments and 100% of the bank's FCC which is considered manageable. Loan loss cover ratios have fallen in line with the sector average, as illustrated in Figure 4 below:

The maturity profile of the loan book has remained broadly stable over recent years, with loans maturing within three months constituting between 10% and 15% of total loans and total loans maturing within one year representing around 45% of total lending. This is longer term than the average for Turkey's banking sector, reflecting the low share of retail loans extended by Kuveyt Turk.

Earnings and Profitability

Figure 6
Performance Measures

(%)	3Q14	2013	2012	2011
Net interest income/average earning assets	4.79	5.00	5.46	5.66
Non-interest expense/gross revenues	55.90	53.15	51.74	53.08
Loans and securities impairment charges/ pre-impairment operating profit	23.71	30.43	31.12	30.18
Operating profit/average total assets	1.59	1.72	1.88	2.01
Operating profit/risk-weighted assets	2.12	2.02	2.28	2.27
Net income/average equity				

Source: Kuveyt Turk, Fitch

Kuveyt Turk's revenue base is concentrated, with the bulk of profit resulting from intermediation activity. Kuveyt Turk's profitability remains broadly in line with peers' (see Figure 11 below), although overall performance indicators declined considerably since 2009 due to tightening net financing margins and reducing fees and commissions reflecting regulatory changes and competition. Kuveyt Turk's margins are held up largely by more profitable SME lending.

Operating efficiency is somewhat weaker than the peer average but is considered adequate given a track record of rapid branch expansion (50 new branches were opened in 2014). Loan impairment charges as a proportion of pre-impairment operating profits were particularly low in 1H14, reflecting good recoveries.

Capitalisation and Leverage

Figure 7
Capital and Leverage Ratios

(%)	3Q14	2013	2012	2011
Fitch core capital/weighted risk	13.34	12.12	12.05	13.10
Tangible common equity/tangible assets	8.94	8.71	8.78	9.63
Tier 1 regulatory capital ratio	12.92	11.90	11.70	12.76
Internal capital generation	12.01	12.44	13.91	12.68

Source: Kuveyt Turk, Fitch

Kuveyt Turk's FCC/weighted risks ratio is considered to be adequate in the light of KFH's commitment to provide frequent capital injections which support growth (TRY360m was injected in 1H14). The bank's regulatory total capital ratio is higher because it includes a USD200m Tier 2 subordinated instrument.

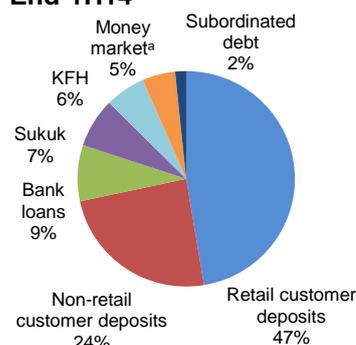

Funding and Liquidity

Figure 8
Funding Dependencies

(%)	3Q14	2013	2012	2011
Loans/customer deposits	102.58	100.24	97.57	108.03

Source: Kuveyt Turk, Fitch

Figure 9
Total Funding by Type at End-1H14

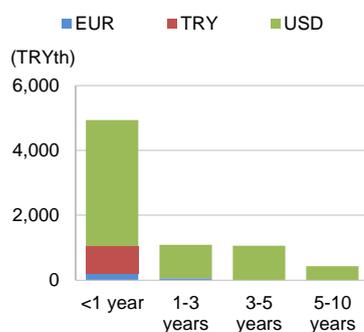

^a Over half is repurchase agreements in TRY

Source: Kuveyt Turk, Fitch

Kuveyt Turk's customer deposits, mainly retail, are well diversified. The top 20 deposits represented a low 7% of total deposits at end-1H14, of which 42% were covered by the deposit protection scheme, highlighting the fragmented nature of the bank's deposit base. The Bahrain branch attracts higher value Gulf-based deposits which regularly account for between 15% and 20% of total deposits at the bank. The stability of the deposit base has been tested several times during previous economic cycles; a high proportion of depositors, particularly within the non-retail segment, are drawn to the bank due to religious principles. A large portion of customer deposits consists of profit share (savings) deposits where remuneration is linked to levels of reported profitability. The stability of such deposits is sensitive to performance trends at Kuveyt Turk and to remuneration rates offered by conventional banks. Market funding (26% of total funding at end-3Q14) includes a sizeable portion of short-term instruments (see Figure 5) and increasingly denominated in FC. Kuveyt Turk has issued public medium-term sukuk bonds (USD500m was raised in 2014) which provide both diversification and maturity lengthening. Domestic issuance is also increasing but the term of lira bonds is generally short-term (3 months – 6 months).

Figure 10

Market Funding Composition by Currency and Maturity

Source: Kuveyt Turk

Market funding is also diversified, although the investor base is narrower for participation banks in Turkey than for conventional banks. Funding from the parent is in the form of subordinated loans and short-term borrowings (equivalent to TRY1.6bn, USD745m); this is not material, representing 9% of total non-equity funding at end-1H14. More recently, the bank has accessed repo funding, backed by its public sector sukuks.

The ability of participation banks to access interbank and central bank liquidity, if required, is limited because their investment options are narrow, reducing the availability of instruments which can be pledged. The Turkish state issued sukuks for the first time in 2013; this has provided participation banks with greater flexibility, as sukuks can be readily pledged at Turkey's central bank to obtain liquidity. All lending at participation banks is structured with monthly instalment repayments; missed payments can be easily detected and act as an early warning signal for potential credit stress. Such information can feed into liquidity stress indicators, triggering corrective action.

Source: Fitch

Kuveyt Turk's highly liquid assets (including balances with the central bank but excluding restricted accounts, short term receivables from banks and Treasury sukuk) equalled a satisfactory 20% of total assets at end-1H14 (19% at end-2013) and covered a substantial 26% of customer deposits. At the same time, liquid assets were sufficient to fully cover market funding payments falling due in 2014 and 2015.

Peer Analysis

The peer table below compares key financial ratios for Kuveyt Turk with its closest rated peer, Turkiye Finans and smaller privately-owned conventional Turkish banks. The banks in the peer group focus on SME and corporate lending. Sekerbank's loan book contains a larger share of small and micro company exposures and consumer loans. It therefore benefits from the highest margins before cost of risk is taken into account.

Copyright © 2015 by Fitch, Inc., Fitch Ratings Ltd. and its subsidiaries. 33 Whitehall Street, NY, NY 10004. Telephone: 1-800-753-4824, (212) 908-0500. Fax: (212) 480-4435. Reproduction or retransmission in whole or in part is prohibited except by permission. All rights reserved. In issuing and maintaining its ratings, Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third-party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings can be affected by future events or conditions that were not anticipated at the time a rating was issued or affirmed.

The information in this report is provided "as is" without any representation or warranty of any kind. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion is based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at anytime for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US\$1,000 to US\$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US\$10,000 to US\$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.
